Kjede med krympeplastanheng og hjerter

Krympeplast er farget med neon Markere, krympt i ovn og satt på et halskjede av plastperler og satengsnor.

01 Draw a design on a shrink plastic sheet.

02 Cut out the design.

03 Colour in the design with a Stabilo neon marker.

04 Make two holes in the design.

05 Put it in the oven at 160°C until the design shrinks – curls up and then flattens again.

06 Attach a round jump ring in each hole.

07 Tie a piece of elastic beading cord in each round jump ring.

08 Thread heart plastic beads onto the elastic beading cord.

09 Cut a piece of satin cord for the necklace and attach fold-over cord ends onto each end of the satin cord.

10 Tie the end of the elastic beading cord onto the loops of the fold-over cord ends.

11 Thread a couple of plastic beads onto the cord to hide the joint.
