

Egg av papp med quilling

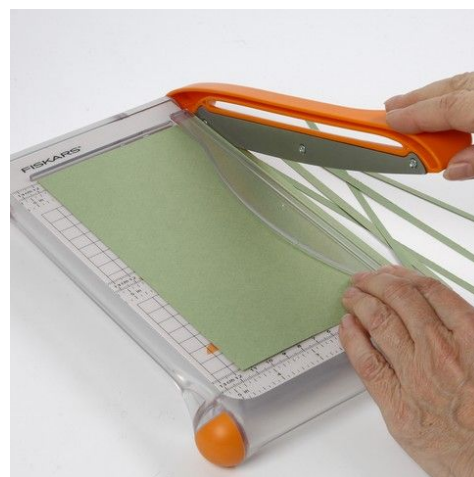

Kartong fra Canson, skåret i strimler på en giljotinskjærer, rullet i spiraler med quilling-penn og formet i et quilling-board. Deretter er alle spiralene limt fast på pappegg, malt med Plus Color akrylmaling.

Inspiration: 12977

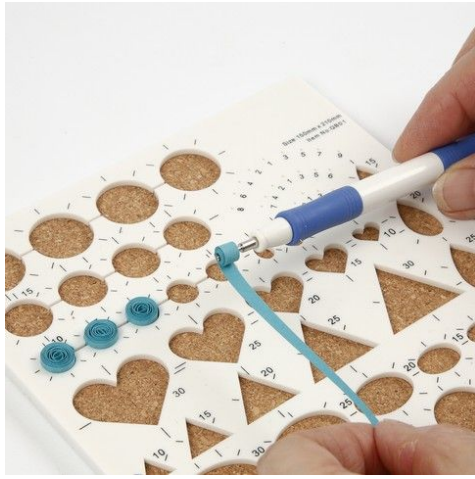

1.

Paint the papier-mâché egg with white Plus Color Acrylic paint.

2.

Cut the Canson card into 5mm wide strips using the guillotine trimmer from Fiskars. Begin by trimming the piece of card so that the guillotine trimmer's printed measuring tool is visible and can be used on the left-hand side.

3.

Place each strip (one at the time) in the slot at the tip of the quilling pen and roll tight to make a coil. Place the coil in the desired mould in the quilling board to keep its shape.

4.

Remove the quilled paper strip from the quilling board mould if this tool has been used. Carefully unroll it between two fingers. Secure the coil with a blob of glue and place the coil in the quilling board until the glue is dry.

5.

Glue the hardened coils onto the egg, so the final result appears with a pattern. You may choose to cover the egg entirely or partly with coils.

6.

TIP! You may choose to squeeze half-sized strips into a slightly larger heart-shaped mould on the quilling board – several at the same time and glue them together with a bit of glue.
